

# Concert Bell F1

## Floriflorus flowers bloom all at once!

Color : Golden yellow petals with dark disk

Size : 60-70 inches tall

Market Use : Landscape, Cut flowers

### ■Characteristics

- i. Short branches.
- ii. Pollen free.
- iii. Unique and voluminous appearance of flowers.
- iv. Small and Dark green leaves make neat appearance.
- v. 5 days after main branch blooms, primary branches bloom all at once.

### ■Cultural Recommendations

1. Sowing □ End of April to July (recommended)

2. Optimal temperature for germination is 20-25°C(68-77F). Under low temperature conditions, put row cover in order to secure the ground temperature.
3. Direct seed(recommended)
4. Transplanting : Plants dislike root disturbance. Transplant before roots start disturbing.
5. Plant spacing:15cm x 15cm(6x6inch) minimum for Cut flowers.
6. 30cm x 30cm(12x12 inches) for Landscape. Better to plant wider.
7. Narrow spacing reduces number of flowers in the middle rows because of insufficient lighting

### ■Days to Maturity

60-70 days (depending on day length)

### ■Notes

- i. Dry condition is unfavorable. Dry condition makes stem shiner and reduces number of flowers. Mulching culture helps stable initial growth.
- ii. Moderate nitrogen content is preferred. Too much fertilizer makes plant too high and bloom late. Less fertilizer reduces the number of flowers.
- iii. Pinching main branch 5 days before blooming helps primary branches bloom more uniformly.
- iv. Early planting tends to grow lateral branches longer.
- v. Minimum growing temperature of 15°C(60F)

## Regarding the purchase of seeds

Seeds are on sale.

If you are in USA and Canada, please contact to next:  
Seed Science INC.
